

Nucleotide Excision Repair (NER) Expression across 26 Tissues (Log2 Scale)

One-way ANOVA (across 26 tissues): Pathway $F(25, 334) = 137.42$, $P = 2.36 \times 10^{-159}$

Individual gene ANOVA: Xpc ($P = 9.88 \times 10^{-126}$) | Rad23b ($P = 2.16 \times 10^{-110}$) | Cetn2 ($P = 7.53 \times 10^{-81}$) | Ddb1 ($P = 1.52 \times 10^{-115}$) | Ddb2 ($P = 1.50 \times 10^{-84}$) | Ercc6 ($P = 2.58 \times 10^{-87}$) | Ercc8 ($P = 1.32 \times 10^{-64}$)

Boxes represent Q1, Mean (middle solid bar), and Q3; whiskers extend to $1.5 \times \text{IQR}$. Points represent individual flight mice ($n = 360$).
Dashed lines connect tissue-level mean values for each gene. Values shown on log2 scale (YARN qsmooth). Genes: XPC, RAD23B, CETN2 (GG-NER surveillance), DDB1, DDB2 (UV lesion detection), ERCC6, and ERCC8 (TC-NER).
