

Fanconi Anemia (FA) Pathway Expression across 26 Tissues (Log2 Scale)

One-way ANOVA (across 26 tissues): Pathway $F(25, 330) = 37.52$, $P = 3.94 \times 10^{-81}$

Individual gene ANOVA: Fancd2 ($P = 1.43 \times 10^{-64}$) | Fanci ($P = 6.81 \times 10^{-77}$)

Gene ● Fancd2 ● Fanci

Boxes represent Q1, Mean (middle solid bar), and Q3; whiskers extend to 1.5 * IQR. Points represent individual flight mice (n = 360).
Dashed lines connect tissue-level mean values for each gene. Values shown on log2 scale (YARN qsmooth). Genes: FANCD2 and FANCI (central ID complex essential for interstrand crosslink repair).
