Mouse age and cohort size across missions and tissues

NASA OSDR ISA metadata refreshed for 48 datasets. Each row is a sex-specific mission stratum; point area shows accession-scoped unique mice across selected flight and ground samples.

Age reported by OSDR (discrete)

8 wk · 9 wk · 10 wk · 9–11 wk · 10–12 wk · 11 wk · 11–12 wk · 12 wk · 14–15 wk · 16 wk · 16–17 wk · 29 wk · 30 wk · 32 wk · 8 mo

Unique mice 10 20 30 40

Tissue order follows the cross-tissue DNA-damage-response GO table. Ages are discrete source values; ranges are retained only where the downloaded OSDR ISA table reports a range. Multiple age strata within one cell are horizontally offset.
