

Per-tissue GO-term relationships from sample-level log2FC

Each panel is a tissue-level Spearman matrix; n is the number of Flight samples contributing all 15 terms. Term order follows the overall average-linkage order.

Term key (cluster order):
1. DNA damage tolerance 2. Telomeric region 3. DNA replication
4. DNA damage response 5. DNA repair 6. DNA-damage signal transduction
7. Cell cycle 8. Mechanical sensing 9. Intrinsic apoptotic signaling
10. DNA-templated transcription 11. Cytoskeleton 12. Cell death
13. Telomere maintenance 14. Translation 15. Mitochondrion
