

Base Excision Repair (BER) Expression across 26 Tissues

One-way ANOVA (across 26 tissues): Pathway $F(25, 334) = 38.10$, $P = 2.02 \times 10^{-82}$

Individual gene ANOVA: Ung ($P = 7.02 \times 10^{-82}$) | Ogg1 ($P = 1.85 \times 10^{-80}$) | Neil1 ($P = 5.84 \times 10^{-57}$)

Gene Ung Ogg1 Neil1

Boxes represent Q1, Mean (middle solid bar), and Q3; whiskers extend to $1.5 \times \text{IQR}$. Points represent individual flight mice ($n = 360$). Dashed lines connect tissue-level mean values for each gene. Genes: UNG (uracil sensor), OGG1 (8-oxoG glycosylase), and NEIL1 (oxidized base repair).
