

Fanconi Anemia (FA) Pathway Expression across 26 Tissues (Linear Scale)

One-way ANOVA (across 26 tissues): Pathway $F(25, 330) = 31.47$, $P = 2.86 \times 10^{-72}$

Individual gene ANOVA: Fancd2 ($P = 8.40 \times 10^{-67}$) | Fanci ($P = 3.24 \times 10^{-69}$)

Boxes represent Q1, Mean (middle solid bar), and Q3; whiskers extend to $1.5 \times \text{IQR}$. Points represent individual flight mice ($n = 360$).
Dashed lines connect tissue-level mean values for each gene. Values shown on linear scale ($2^{\log_2} - 1$). Genes: FANCD2 and FANCI (central ID complex essential for interstrand crosslink repair).
